

WATER RETICULATION KIT

The Global Defence Solutions (GDS) Water Reticulation Kit (WRK) has been designed to support the management of drinking water and grey wastewater for the GDS range of Deployable Catering, Hygiene and Laundry Systems.

WRK Water Systems deliver complete water infrastructure solutions for austere environments. They store, treat, and distribute water while removing up to 99% of solids, fats, oils, and grease (FOG) from waste discharge. Integrated bladder systems ensure efficient, reliable distribution of both potable and grey water wherever it's needed.

EASY TO DEPLOY

Quick and simple setup via a system of camlock fittings and layflat hoses.

TRIED AND TESTED

The GDS Water Reticulation System has been tried and tested for reliability and robustness in the field by Australia's Defence Force.
