

CONTAINERISED SECURE FACILITIES

Global Defence Solutions (GDS) design and manufacture Containerised Secure Facilities that meet the highest security standards, providing robust, portable solutions to protect sensitive information, people, and assets in any environment. Engineered and fabricated at GDS's Nowra facility and certified to ASIO Technical Notes, our containers deliver trusted protection with security ratings up to Zone 5.

MULTIPLE LAYERS OF SECURITY

Our Containerised Secure Facilities are engineered with advanced protection measures, including sound-attenuated materials, commercial and Type 1A security alarm systems, and integrated electronic access control. Independent specialists conduct rigorous testing to verify audio security and ensure compliance.

Access is controlled through a double-door configuration leading into a recessed vestibule entry, which houses the required security and monitoring systems.

These facilities deliver a portable, cost-effective solution for safeguarding and processing electronic classified information with confidence.

RAPID DESIGN, BUILD & DEPLOYMENT

- Constructed within a 10', 20' or 40' container using lightweight components for quick and easy deployment in under 30 minutes.
- Can be transported via land and sea or configured for air transportation.

CERTIFIED TO ASIO TECHNICAL NOTES

- Our containers are certified and accredited in line with ASIO's Technical Notes, ensuring people, information and assets are protected.
- We build and design secure containers for various access requirements and restricted access areas, up to and including Secure Zone 5.
- Configured to meet mission system requirements.

MANUFACTURED IN AUSTRALIA

From our head office in South Nowra, NSW, GDS has successfully designed and fabricated specialised secure containers for the Australian Defence Force and commercial projects. We work closely with you from initial concept, through complete fitout, to deliver a solution to meet your requirements.

STRINGENT COMPLIANCE AND TESTING

We take pride in ensuring that our products meet the highest standards of safety, performance and certification. GDS secure containers have been designed and tested to meet the stringent requirements of ASIO Technical Notes, reflecting our commitment to delivering quality solutions for all of your secure facility needs.

CUSTOMISABLE FIT-OUT

Integrated in the container is a utility room which is used to separate the core operating area from the Environmental Control Unit. These rooms are fitted with a climate control system including air filters and variable speed fans to regulate the circulation of fresh air within the core operating room.

Other fit-out options include LED lights, power outlets, secure storage areas including cabinets and racks for classified assets, and office furnishing for personnel operating within the container.
